SUMMARY

Senior software engineer with 6+ years of experience building secure, scalable APIs and cloud-native systems. Proven success leading teams, designing microservices architectures, and aligning technical delivery with business goals. Strong communicator with experience mentoring engineers and collaborating cross-functionally to drive product outcomes.

WORK EXPERIENCE

Mphasis **Mar. 2021 - Present**

Senior Software Engineer | Team Lead | (Contracted to FedEx) *Remote*

- Led development of 5+ enterprise-scale microservices using Java (Spring Boot), JMS, Redis, and Cassandra, powering logistics systems that processed up to 100M+ packages/day.
- Architected queue-based messaging flows and caching layers to ensure reliable, scalable service communication across FedEx and USPS integrations.
- Directed a team of 10 engineers for 6 months, mentoring junior devs, managing sprint planning, and collaborating with stakeholders to define technical strategy and delivery goals.
- Drove CI/CD migration from Jenkins to GitHub Actions, optimizing cloud-based deployment and reducing operational costs.
- Delivered integration-tested, production-grade APIs with full documentation, while coordinating with cross-functional teams to ensure end-to-end delivery and data integrity.

Infosys **Jul. 2019 - Mar. 2020**

Software Engineer *Vienna, VA*

- Modernized legacy invoicing applications processing ~10K transactions daily by upgrading Java Spring 3 to Spring 5, refactored backend MVC components and unit tests for performance, readability, and maintainability.
- Cleaned up outdated code patterns and replaced deprecated Java/Spring features with modern equivalents, leaving comprehensive inline documentation to support long-term scalability.
- Collaborated within an Agile Scrum team using Angular (frontend) and Oracle SQL (data layer) to deliver secure, standards-aligned software for enterprise billing workflows.

Revature **Feb. 2019 - Jul. 2019**

Software Engineer *New York, NY*

- Developed the backend of RideForce, an internal ride-sharing web app using Java (Spring Boot) and Oracle SQL. Enabled ~500 employees to coordinate commutes and optimized ride matches with Google Maps API integration.
- Built MVC architecture and database access layers, and JUnit tests to ensure clean, reliable development, contributed to Angular UI and implemented logic for selecting least-deviation drivers.
- Maintained CI/CD pipelines and cloud deployments using Jenkins, Git, Gradle, AWS, and Docker in an Agile team environment.

SKILLS & TECHNOLOGIES

Languages: Java, JavaScript/TypeScript, Python, SQL, C++, C#, HTML
Skills: OOP, RESTful APIs, Web Services CI/CD, Cloud Hosting, Microservices, Agile/Scrum, Test-Driven Development (TDD), DevOps, Test Automation, OAuth, JWT, SSL/TLS, Quality Assurance, Open Source
Technologies: Spring, React, Next.js, Angular, Tailwind CSS, PostgreSQL, Docker, AWS, Kafka, Redis, MongoDB, MySQL, Cassandra, NoSQL, Splunk, SonarQube, AppDynamics, Grafana, Git, GitHub Actions, Jenkins, ReadyAPI, Eclipse, Jira, Postman, Selenium

EDUCATION

Bachelor of Science in Computer Science, Cum Laude | GPA: 3.72
College of Staten Island – Staten Island, NY | Dec. 2018

PROJECTS & INTERESTS

TurtleJr.dev - Personal productivity platform and PWA portfolio built with Next.js, Tailwind, and deployed via Vercel. Includes tools like a personalized to-do list, calculator, and learning trackers.
