WORK EXPERIENCE

Mphasis **Mar. 2021 – Present**

Software Engineer *Remote*

- Contracted by FedEx Ground to be part of the DeepDive scrum team. Our main objective was to create Java Spring APIs using industry standards in security and networking for data transfer and transformation in a full-stack agile environment. This is achieved with the use of tools including: Java with Spring Framework, Jenkins, SwaggerAPI, Splunk, AppDynamics, SonarQube/Jacoco test coverage, Redis Persistence, and Cassandra Datastax to present a fully functional and tested build using the best coding practices available.
- Employed microservices to communicate and publish transformed data with Java Message Service for downstream services, ensuring seamless data flow in a queue and topic message system.
- Created cloud deployments for applications in secure FedEx hosted machines to allow easy API access and use for other teams and services.
- Provided multiple knowledge-transfers and demos for the apps we brought forth, and performed system integration testing cooperatively with other teams in testing and production environments.

Infosys **July. 2019 – Jan. 2020**

Software Engineer *Oakland, VA*

- Contributed to the creation of an electronic invoice system for a prominent AT&T contract, adhering to industry standards for networking and security practices within an agile scrum team.
- Engaged contemporary technologies such as Java Spring, OracleSQL, and front-end tools to successfully complete the project of updating legacy applications with my scrum team.

Revature **Feb. 2019 – Jul. 2019**

Software Engineer *New York, NY*

- Developed and implemented RideForce, an internal ride-sharing software for employees, enabling them to quickly locate proximity based ride-shares for commuting to work.
- Integrated Google Maps API to facilitate matching of ride-shares established on distance.
- Collaborated with an agile team over multiple sprints utilizing tools such as Slack, Gradle, Git, Jenkins, and AWS together for efficient communication, dependency management, version control, and deployments respectively.

SKILLS, LANGUAGES & TECHNOLOGIES

- **Skills:** Object oriented programming, continuous integration continuous deployment (ci/cd), Restful api development, web development, cloud hosting
- **Languages:** Java, Javascript/Typescript, SQL, Python, C++, C#
- **Technologies**: Git, Spring, React/NextJs, Tailwind, PostgreSQL, Docker, Amazon Web Services (AWS)

EDUCATION

College of Staten Island **Dec. 2018**

Bachelor of Science, Computer Science *Staten Island, NY*

- Reached a distinguished 3.72 GPA throughout the Computer Science program
- Graduated with honors, receiving the Cum Laude distinction

PROJECTS & INTERESTS

- **Projects:** TurtleJr.dev my all-in-one self driven portfolio progressive web application, written in a mobile first design using NextJs
- **Interests**: gardening, playing with animals, competitive games, painting
